ATLAS 1" SPACER ADAPTER & CLOCKING RING

KIT CONSISTS OF:

No.	Qty.	Part No.	Description
1.	1	51-0404	ADAPTERRING
2.	6	723731	S.H.C.S. 3/8"-16x 1"

This 1" spacer adapter is used when a transmission shaft is too long or the transfer case input is too shallow. The spacer has several clocking options. These counter sunk holes are not symmetrical and will only line up with your transfer case or adapter in one rotation. With the clocking holes on the ring and the rotation holes on the Atlas you should have quite a few rotation options. The counter sunk holes can be used up to any of the Atlas input ring holes and then the studs can be installed into any group of 6 on the ring. Test fitting the ring to the transmission and to the Atlas is recommended so you the spacer gets properly aligned to all the mounting holes. Once everything has been tested, the Atlas studs can then be installed into the 51-0404 ring for mounting to the transmission.

SPECIAL NOTE: The components packaged in this kit have been assembled and machined for specific types of conversions. Modifications to any of the components will void any possible warranty or return privileges. If you do not fully understand the modifications or changes that will be required to complete your conversion, we strongly recommend that you contact our sales department for more information. This Instruction Sheet is only to be used for the assembly of Advance Adapter components. We recommend that a service manual pertaining to your vehicle be obtained for specific torque values, wiring diagrams and other related equipment. These manuals are normally available at automotive dealerships and parts stores.
